High Quality Network Security Solution

iPOLiS is the collective name for Samsung Techwin's range of innovative IP based video security products. Offering solutions for a wide range of network based surveillance applications, the iPOLiS range consists of everything from megapixel and HD network cameras to network video recorders and intuitive Centralized Management Software (CMS) to make it easy to build a fully integrated security system.

Why IP?

Remote Accessibility

Network based IP surveillance systems are extremely easy to view, control and administer from anywhere in the world. What is more, multiple video streams are transmitted at various network bandwidths to enable effective viewing over a range of equipment from PCs to SmartPhones.

Easy Integration

iPOLiS network based IP solutions contain dual outputs (BNC and Ethernet) to make the step up from analogue to IP cost effective and simple. Users are able to run IP equipment on an analogue network until the cabling is upgraded to CAT5, or use video encoders to transmit full IP data down the existing coaxial cable.

Easy Expansion

Upgrading an analogue system can be extremely costly and time consuming because all cables need to be run from the camera equipment directly back into the control room. A network based IP solution does not have such issues and it is extremely easy to add additional cameras or recording/storage devices to the network.

Intelligent Monitoring

Network video surveillance products have built in intelligent video analytic functions including Motion Detection, and Object Tracking. These functions help users to manage the videos in more convenient and effective ways. Users can quickly search recorded footage by specific events, such as optical trip-wire activation, without having to review hours of video.

Samsung Network System / Technology

Network System Configuration

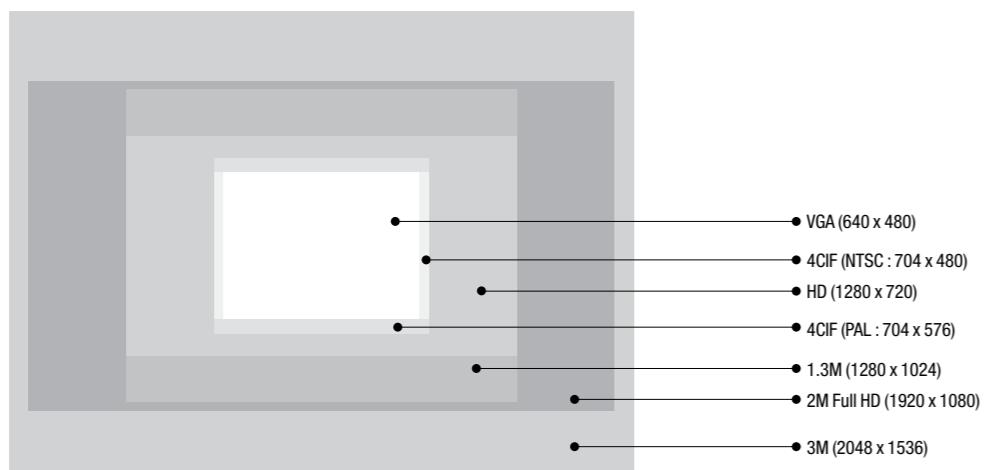

An IP based security system brings additional benefits to the user than that of a traditional analogue system, in terms of low cost, convenient installation, and easy expansion/integration. Samsung provides one-stop IP video surveillance solution; Network Camera, Encoder, Monitoring Software, Hardware NVR, and Software NVR (Recording Software).

Various Image Resolutions

iPOLiS network camera supports various resolutions, from 4CIF to VGA, Megapixel, and HD.

	VGA	4CIF	HD	1.3Megapixel	2Megapixel (Full HD)	3Megapixel
NTSC	640 x 480	704 x 480	1280 x 720	1280 x 1024	1920 x 1080	2048 x 1536
PAL		704 x 576				

Higher resolution images of megapixel network cameras allow for the capture of exceptionally clear details in application such as banks. However, transmitting megapixel images require considerable network bandwidth. With iPOLiS, users have a range of network cameras from which to select to suite the users' needs and network environment.

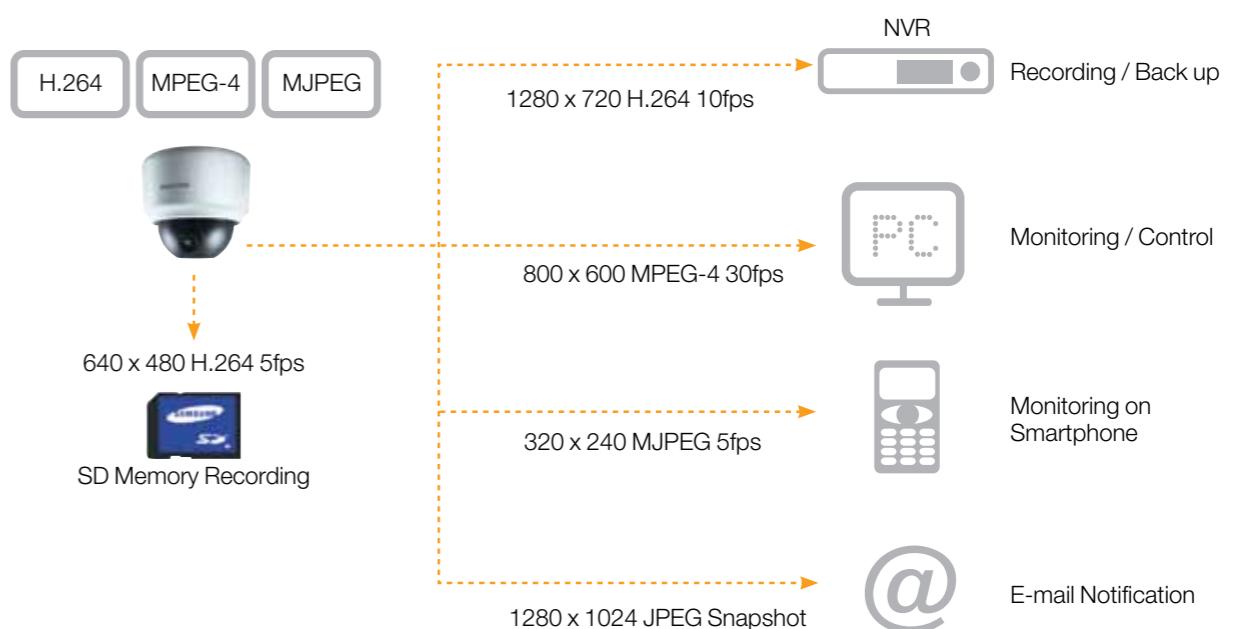

Full HD (High Definition) Resolution

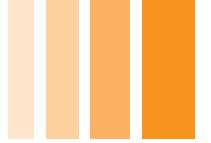

Full HD / Megapixel cameras deliver a much higher resolution than can be achieved on a standard definition camera. A Full HD (2.1 Megapixel) resolution image has 5 times the resolution of a standard definition image allowing the operator to see much more detail over a wider area. The 7000 series of Samsung network cameras provides Full HD 3 Megapixel resolution, making it useful for the applications where capturing this level of detail is vital such as ATM machines, banks, casinos and transport hubs where the key objective of video surveillance is to be able to identify people or objects.

Multiple Codec & Streaming

The WiseNet network cameras support simultaneous streaming of multiple video compression technologies such as H.264 and MJPEG. This facilitates multiple purposes monitoring such as real-time, high-quality or high-efficiency recording, mobile monitoring, E-mail notification and SD memory recording.

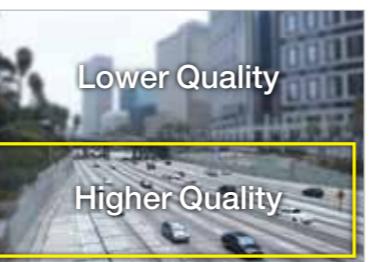

Samsung Network System / Technology

Samsung Smart Codec - ROI (Regions of Interest)

In the majority of scenes viewed by a surveillance camera only a proportion of the image is of interest to the operator. With the continued increase in resolution and therefore data sizes, there is an increased amount of "Wasted Data" created. Samsung's smart codec technology in their network cameras allow them to be programmed to capture in greater detail the real ROI, such as moving objects, human faces, doors or windows than the remaining of the scene. This smart codec feature produces lower data sizes while clearly highlighting the ROI.

Intelligent Video Analytics

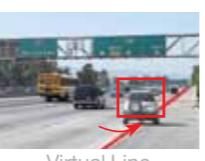

Intelligent video analytics can be used for efficient monitoring.

1) Disappearing

It activates an alarm immediately when an object disappears from a defined monitoring area.

Motion Detection

Virtual Line Detection

Enter / Exit Detection

2) Appearing

It activates an alarm immediately when an object appears from a defined monitoring area.

Object Counting (SND-3080C)

Scene Change Detection (Tampering)

Appear / Disappear Detection

3) Virtual Line

It activates an alarm when an intruder Enters or Exits a virtual boundary area on the monitor.

4) Enter / Exit

It activates an alarm when an intruder comes into a virtual boundary line on the monitor.

5) Scene Change (Tampering)

Scene change detection can detect interference and sends an alarm signal when the camera's operation has been Tampered with, such as a manual change in the camera's angle, removal of the camera lens, defocus and blockage of the camera lens with cloth or spray paint.

* The intelligent video analytics functions supported by each camera can vary by model.

SSNRIII (Samsung Super Noise Reduction III)

Useful in low light condition. This technology eliminates image noise in low light conditions without creating image blur or ghosting.

SSNRIII Off

SSNRIII On

SSDR (Samsung Super Dynamic Range)

Useful in high contrast or backlight scene. Automatically lighten the dark areas within a scene whilst maintaining the brighter areas at the same level. This ensures that the dark areas become more visible allowing the operator to view objects in the shadows.

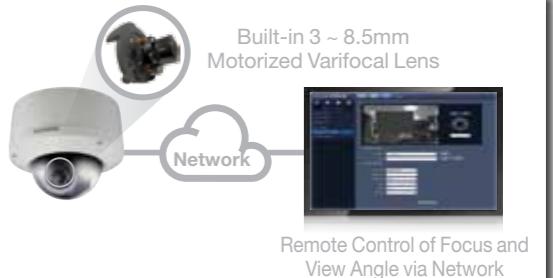

SSDR Off

SSDR On

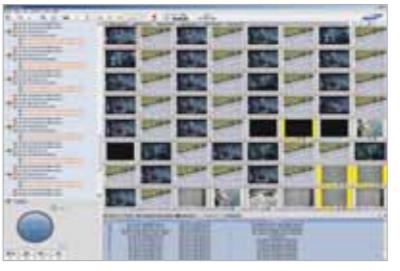

Remote Focus Control

The HD resolution dome and bullet cameras incorporated a motorized varifocal so that users can adjust the focus and view angle of the camera very easily through the network from a remote site without having to visit the installation and open the camera's housing.

Convenient Management through CMS (Central Management Software)

The NET-i viewer is a central management software from Samsung to manage multi channel videos. It provides a solution to control Samsung network products which are connected to the network through a single user interface.

Entrances and emergency exits

(Recommended product : [SND-7080](#), [SNV-5080R](#), [SND-3082](#))

The cameras installed on the entrances and emergency exits of buildings should produce an excellent performance in low contrast scene using Wide Dynamic Range; day and night. In particular, the emergency exits are generally poorly light; it is for this reason that cameras equipped with interred illumination are installed.

External entrance (Recommended product : [SNB-7000](#), [SNB-3002](#))

For the external entrance where all visitors and vehicles come in and out, a high-resolution and excellent low-contrast correction model should be installed. If you need to identify the plate number of a vehicle, it is advisable to install a dedicated camera in sync with a 1CH network encoder.

Elevator (Recommended product : [SNV-5010](#), [SND-3082](#))

An elevator camera is mostly used to detect damage to property and to prevent an incident involving passengers. However, it is possible for a single camera with a (3mm fixed lens or 3.9x variable focus lens) wide angle lens can cover the whole area inside the elevator.

Counter facilities (Recommended product : [SNO-5080R](#), [SNB-3002](#))

To detect an intrusion at night, a camera equipped with the IR illumination can be installed at counter facility. For night-time surveillance, select a PTZ-enabled camera that can be linked with intrusion detecting sensors.

Parking lot (Recommended product : [SNB-5000](#), [SNB-3002](#))

A suitable number of excellent low-contrast visibility cameras should be installed viewing the lines of the parking lot, where damages to cars and accidents can occur.

Inside / outside of the building

(Recommended product : [SND-7080](#), [SNP-5200H](#), [SNP-3371TH](#))

In crowded areas where people are continually moving in and out of a building, it is necessary to install a camera that supports high resolution with wide visibility and also can have durability against dust or humidity.

Production line (Recommended product : [SNP-5200](#), [SNP-3302](#))

For the production line, it is recommended to install a camera that covers a wide area of the workshop where workers congregate during operational hours that can protect itself from on-site dust. Generally speaking housings with integrated model is suitable for this purpose.

Logistics warehouse

(Recommended product : [SNO-7080R](#), [SNV-7080R](#), [SNP-3371TH](#))

For the logistics warehouse, a model featuring the infrared illumination and high-resolution imagery is recommended.

Main road (Recommended product : [SNP-5200H](#), [SNP-3371TH](#))

For the main road with high volumes of traffic, it is necessary to install a camera that enables pan/tilt/zoom operations with high-resolution, which are useful especially for general/night surveillance.

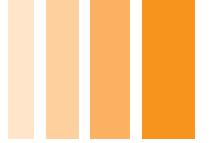

Control room

The control center that monitors and controls the overall system status must provide an efficient integrated supervisory management environment that can view and store the surveillance video upon demand.

HDD Extension

1. Hardware NVR

SRN-1670D/470D

2. Software NVR

• NET-i ware (SNS-SF064)

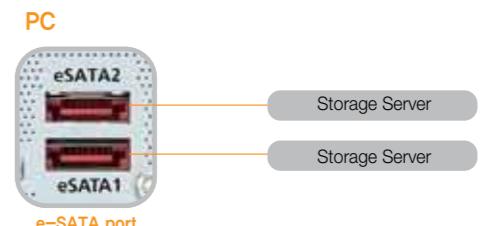

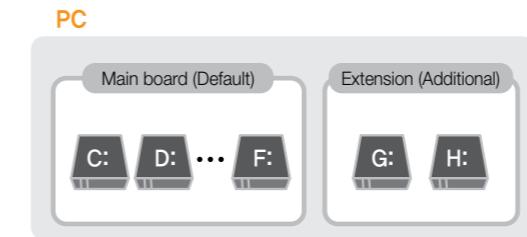

- The scalability depends on PC system specifications.

1) PC Internal expansion type

- Additional drive installation up to the number of SATA port on the PC main board

2) PC External expansion type

- DAS (Direct Attached Storage)
- Connect storage server to PC e-SATA port
- To install expansion board to the main board and add HDDs

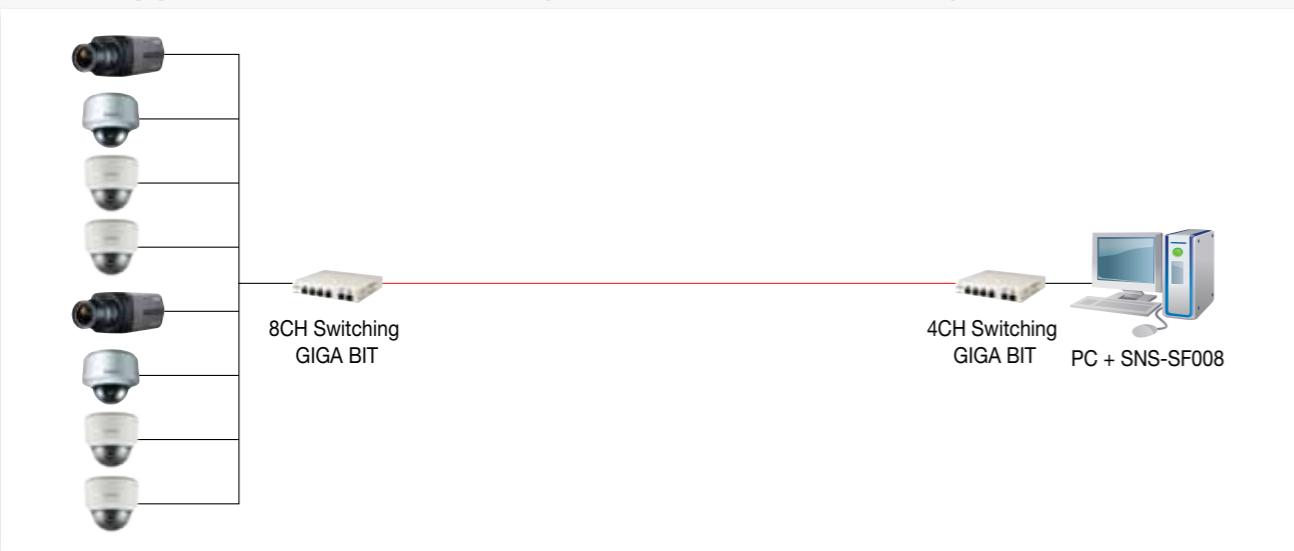

Network System Configuration

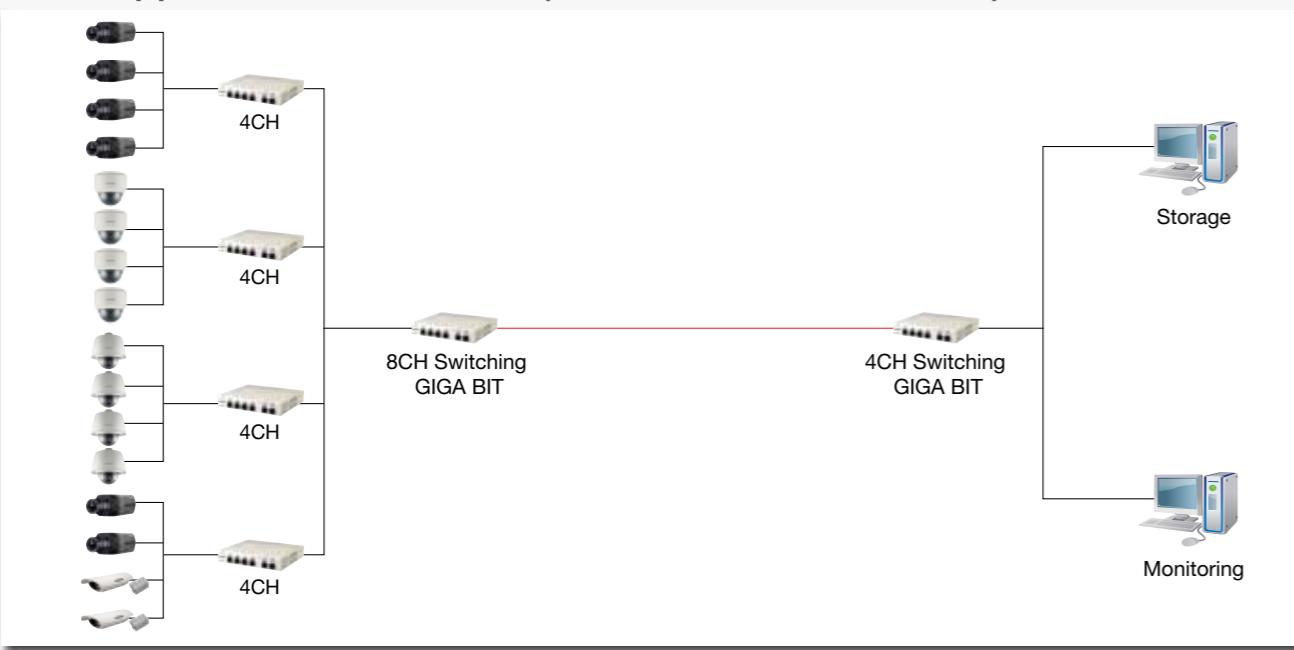

Small application with PC+S/W (4 or less than 4 cameras)

Small application with PC+S/W (8 or less than 8 cameras)

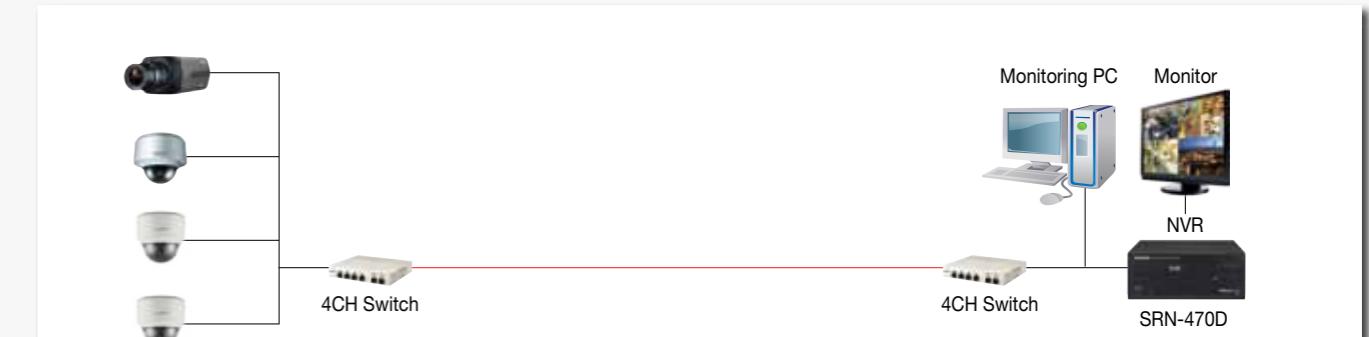

Small application with PC+S/W (16 or less than 16 cameras)

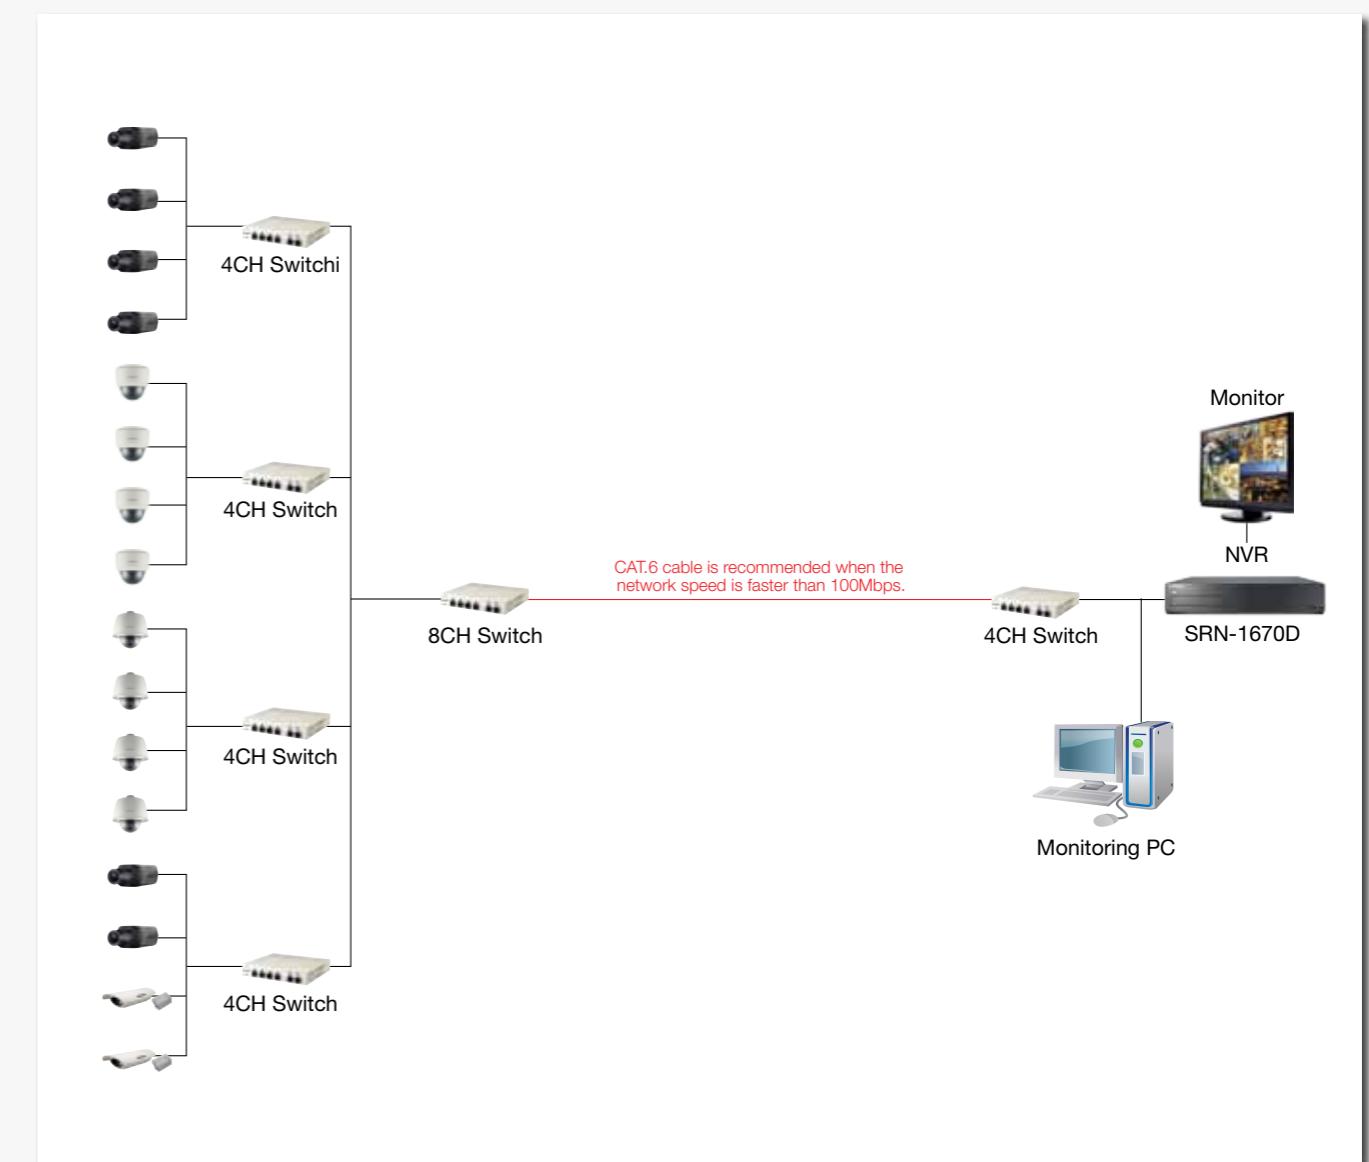

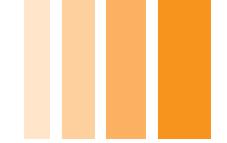

* The network speed can be lowered when using shared network

Network Terms

NVR (Network Video Recorder)

Similar functionally to a DVR, however a NVR accepts IP camera. NVRs can also be software based, meaning that they can only accept IP camera streams over the Internet.

CCD (Charge Coupled Device, CCD)

A charge coupled device (CCD) is a device that converts light into an electrical charge, each pixel's charge value is converted into a digital value by measuring the amount of charge at each photosite and converting that measurement to binary form.

CMOS (Complementary Metal Oxide Semiconductor)

A CMOS is a widely used type of semiconductor that uses both negative and positive circuits. CMOS chips require less power than chips using just one type of transistor. CMOS image sensors also allow processing circuits to be included on the same chip.

TCP/IP (Transmission Control Protocol / Internet Protocol)

The TCP/IP model describes a set of general design guidelines and implementations of specific networking protocols to enable computers to communicate over a network. TCP/IP provides end-to-end connectivity specifying how data should be formatted, addressed, transmitted, routed and received at the destination.

Protocol

A special set of rules governing how two entities will communicate with each other. As an example it can refer to a DVR sending a camera's video image to PC via internet.

ONVIF (Open Network Video Interface Forum)

ONVIF (Open Network Video Interface Forum) that was formed to create a standard for how IP products within video surveillance and other physical security areas can communicate with each other.

VBR (Variable Bit Rate)

Variable bit rate (VBR) is a term used in telecommunications and computing that relates to the bit rate used in sound or video encoding. VBR allows a higher bitrate (and therefore more storage space) to be allocated to the more complex segments of media files while less space is allocated to less complex segments. The average of these rates can be calculated to produce an average bitrate for the file.

GOP (Group of Picture)

In Video coding, a group of pictures, or GOP structure, specifies the order in which intra- and inter-frames are arranged. The GOP is a group of successive pictures within a coded video stream. Each coded video stream consists of successive GOPs. From the pictures contained in it, the visible frames are generated.

IPv4 (Internet Protocol version 4)

Internet Protocol version 4 (IPv4) is the fourth revision in the development of the Internet Protocol (IP). It is a connectionless protocol for use on Ethernet networks. It operates on a best effort delivery model; in that it does not guarantee delivery, nor does it assure proper sequencing or avoidance of duplicate delivery.

IPv6 (Internet Protocol version 6)

Internet Protocol version 6 (IPv6) is a version of the Internet Protocol (IP) intended to succeed Internet Protocol version 4 (IPv4), which currently directs almost all Internet traffic, but is running out of addresses. IPv6 allows up to 2128 addresses, a massive increase from the 232 (about 4.3 billion) addresses possible with IPv4, and includes several other improvements.

UTP (Unshielded Twisted Pair cable)

A cable medium with one or more pairs of twisted insulated copper conductors bound in a single sheath, with no overall or individual screen. Currently the most common method of bringing telephone signals and data to the desktop.

CAT.5 (Category 5 cable)

Category 5 cable (Cat 5) is an unshielded twisted pair cable standard used in structured cabling for computer networks such as Ethernet. It is also used to carry other signals such as telephony and video, supporting a maximum speed of 100Mbps. This type of cable is commonly used in home/office application.

CAT.6 (Category 6 cable)

Category 6 cable, commonly referred to as Cat 6, is a cable standard for Gigabit Ethernet and other network physical layers that is backward compatible with the Category 5/5e standards. The cable standard provides performance of up to 250 MHz and is suitable for 10BASE-T, 100BASE-TX (Fast Ethernet), 1000BASE-T/1000BASE-TX (Gigabit Ethernet) and 10GBASE-T (10-Gigabit Ethernet).

SD (Standard Definition)

The term is usually used in reference to digital television, in particular when broadcasting at the same (or similar) resolution as analogue systems. In terms of the pixel resolution it includes 720 x 480 and 640 x 480.

HD (High Definition)

The term refers to any video system of higher resolution than standard-definition (SD) video, and most commonly involves display resolutions of 1,280x720 pixels (720p) or 1,920x1,080 pixels (1080i/1080p). The 1080p sometimes refers to 'Full HD'.

PoE(PoE+) (Power over Ethernet)

Power over Ethernet provides power to a network device via the same cable as used for the network connection. The original IEEE 802.3af-2003 PoE standard provides up to 15.4 W of DC power (minimum 44 V DC and 350 mA to each device). Only 12.95 W is assured to be available at the powered device as some power is dissipated in the cable. The updated IEEE 802.3at-2009 PoE standard also known as PoE+ or PoE plus, provides up to 25.5 W of power

Ethernet

Ethernet is a family of computer networking technologies for local area networks (LANs). The most commonly installed Ethernet systems are 10BASE-T and 100BASE-T10, which provide transmission speeds up to 10 Mbps and 100 Mbps respectively. Systems communicating over an Ethernet divide a stream of data into individual packets called frames. Each frame contains source and destination addresses and error-checking data so that damaged data can be detected and re-transmitted.

Compression Algorithm

This is an algorithm to effectively transmit and/or record data (video/audio). The most common video compression standard used in security products are JPEG, MJPEG and H.264. The H.264 is currently one of the most commonly used formats for the recording, compression, and distribution of high definition video.

Modem (Modulation Demodulation)

A modem (modulator-demodulator) is a device that modulates an analog carrier signal to encode digital information, and also demodulates such a carrier signal to decode the transmitted information. The goal is to produce a signal that can be transmitted easily and decoded to reproduce the original digital data.

FDF (Fiber Distribution Frame)

The distribution frame is a passive device which terminates cables, allowing arbitrary interconnections to be made. In physical network security industry, the FDF refers to the enclosure to protect the optical fibre cables for network devices.

Switch

A switch is a network device that connects network segments together and which selects a path for sending a unit of data to its next destination.

Backbone

A backbone network or network backbone is a part of computer network infrastructure that interconnects various pieces of network, providing a path for the exchange of information between different LANs or sub networks. A backbone can tie together diverse networks in the same building, in different buildings in a campus environment, or over wide areas. Normally, the backbone's capacity is greater than the networks connected to it.

Streaming Server

Streaming server refers to the delivery method of the medium rather than to the medium itself. It is a server that is constantly received by and presented to an operator's terminal while being delivered by a streaming provider.

Streaming

Streaming refers to a sequence of data, video or voice elements made available over time.

RJ45

A registered jack connector and wiring pattern used for the connection of a high-speed computer modem and modem device.
